STATINTL Subject: Contract No. [redacted]

Dear Sir:

STATINTL In accordance with the original specifications of the subject contract, the counter capacity requirements for measuring X and Y positions of the desired points on 70 mm film would not exceed five (5) digits. Thus, we
STATINTL have fabricated three (3) [redacted] PIGMIs (Position Indicating General Measuring Instrument) with five (5) digit capacity for use on the three (3)
STATINTL Nadir Determination Devices being fabricated on this contract.

On 31 August 1959, we were visited by your Messrs. [redacted] and STATINTL [redacted] who, at that time, indicated a desire to accomplish greater measurements through the technique of "leap-frogging", up to a maximum of six (6) digits.

STATINTL As Messers. [redacted] were informed at the time of their visit, all three (3) counters (PIGMI) were then completed. Therefore, we are
STATINTL pleased to quote a price of [redacted] for the modification of these counters to provide six (6) digit capacity. A copy of our cost-breakdown is attached.

This modification can be accomplished without interruption of continuity on this program, provided your supplement authorizing the change in scope and additional funds is received by us no later than 9 October 1959.

Your prompt attention to this matter will be sincerely appreciated.

STATINTL

Very truly yours,
